Simulation Facilitator Development

NEW TO SIMULATION

SIMULATION FACILITATION PATHWAYS – ELEARNING
Introduces simulation concepts and prepares learners for their first in-person courses.
30-90 minutes

SIMULATION LEARNING STRATEGIES
This 2 day course aims to provide an experience that will allow learners to:
- Develop a foundational knowledge of simulation based learning strategies
- Identify elements of effective teamwork and incorporate those elements into simulation based learning objectives
- Learn the foundations of debriefing skills and their application in simulation based learning
- Explore simulation scenario development
- Facilitate a simulation scenario

GETTING GOING WITH SIMULATION (First 3 months to 1 year)

AT THE ELBOW SUPPORT
As the learner starts out facilitating their own simulation events, a simulation educator can assist with scenario access and design. They can attend the event to help the learner through the facets.

After the learner has been facilitating simulation for a while, the simulation educator can come back and help the learner to build further skills. The frequency of support will vary and is learner-driven.

SCENARIO DESIGN WORKSHOP
This 3 hour workshop aims to provide an experience that will allow learners to:
- Write clear, measurable, achievable learning objectives related to simulation design
- Consider functional task alignment, multiple simulation models, and modalities during simulation design
- Consider the use of simulation life savers during both the design and implementation of simulation scenarios

IN-SITU SIMULATION SAFETY SESSION
This 45 minute talk aims to provide an experience that will allow learners to:
- Explore what’s trending in In-situ Simulation Safety including checklists, signage, labels and safety pledge
- Become familiar with reporting and tracking options to help you manage safety hazards and improvement opportunities identified during in-situ simulation

CO-DEBRIEFING WORKSHOP
This one day workshop aims to provide an experience that will allow learners to:
- Establish a shared mental model within the group re: co-debriefing and peer coaching
- Practice co-debriefing and peer coaching
- Network and build relationship between participants

EXPANDING YOUR TOOLKIT (1 Year+)

PEARLS FOR SYSTEM INTEGRATION WORKSHOP
This 2 hour workshop aims to provide an experience that will allow learners to:
- Describe the rationale for system-focused simulations and debriefing
- Articulate the key features of the modified PEARLS framework (PSI) and script
- Integrate and apply the PSI framework and script

CLINICAL EVENT DEBRIEFING USING INFO WORKSHOP
This 4 hour workshop aims to provide an experience that will allow learners to:
- Implement the INFO clinical debriefing process in their own clinical areas
- Review clinical event debriefing in the clinical setting
- Have an opportunity to facilitate a simulated INFO session debriefing.
- Feel equipped to teach the INFO Basics Workshop

ADVANCED DEBRIEFING COURSE
Note: This is not an in-house course. It is brought to VCH every 2 years and open to participants with at least 12 months of regular simulation and debriefing experience.
This one day course aims to equip participants with advanced briefing skills by providing an experience that will allow learners to:
- Explore important ways to avoid common debriefing challenges and pitfalls
- Overcome difficult debriefing situations by implementing an advanced toolbox of debriefing skills
- Receive guided, hands-on experience in the use of advanced debriefing skills
- Network with national simulation experts, as well as with simulation facilitators from throughout VCH

RAPID CYCLE DELIBERATE PRACTICE
